

CONCRETE CUTTING VACUUM GENERATOR

GUARDA
WORK HARD. BREATHE EASY.

Model	DSGVGL
Max Volume	376m/hour
Motor	Honda GX200
Power	4.1kW
Weight	22kg
Dimensions (LxWxH)	475mm x 800mm x 530mm

Guarda Vacuum Generator

Simply put, the Guarda vacuum generator is a petrol powered vacuum and can be fitted with a water pump if required. The unit is easy to setup and is perfect for use in remote locations where there is no access to power and water.

Wet cutting requires an inline separator to be placed between the saw and the vacuum. The separator captures the slurry and water whilst the fumes pass through to the vacuum generator. The vacuum generator can also be used when dry cutting where a Hepa filter is placed in the vacuum line.

The Vacuum generator connects simply to the Guarda Edge saw or Vacuum tube or can be used as a standalone vacuum for cleaning up water and slurry.
