Husqvarna K970 Chain Saw

The K970 Chain saw, is no ordinary chain saw. Whilst having a similar appearance of a conventional timber chainsaw, this saw is designed for cutting concrete.

The diamond tipped chain can plunge cut up to 350mm deep through concrete and masonry.

The K970 chain saw is ideal for cutting window and door openings in walls where you don't want to overcut the corner and can cut openings as small as 110mm x 110mm.

The saw comes with a 14" bar but the diamond chain can be purchased separately.
