

REBAR CUTTER

RAPID CUT 12L

PROYECSA 

Model	RCUT12L
Max Cutting Range	12mm (70kg/mm ²)
Cutting Velocity	20 Cuts Per Minute
Air Pressure Required	90-120 PSI (6-8.5 Bar)
Air Consumption:	Approx 24L / Cut at 7 Bar
Replacement Jaws:	1260TM
Weight	12kg
Dimensions (LxWxH)	940mm x 250mm x 250mm

RapidCut 12L Pneumatic Rebar Cutter

The RapidCut 12L is ideal for cutting rebar and mesh up to 12mm in thickness. The Pneumatic cutter has the same jaw action as standard bolt cutters and very simple to use and handle. The 12L features a longer stem meaning they can be used without needing to bend over reducing fatigue and back strain. They require minimal maintenance, reducing down time and making them a very cost-effective tool in demanding applications. The flat profile of the jaw means mesh can be cut while it is flat on the ground. These units are best suited to precast yards and mesh processing facilities.
