

SUBMERSIBLE PUMP

SPFP2 SLUDGE PUMP

FORZA

Model	SPFP2
Maximum Flow	63,000 Litres / Hour
Maximum Head	28 Meters
Shaft Length (m)	7m
Outlet	2" (50mm) Camlock
Weight	26kg

Forza SPFP2 Flex Drive Sludge Pump

The Forza SPFP2 is a high quality flex drive sludge pump for dewatering construction sites, excavations, pier holes, dams and trenches. Starting at the pump end, the tough cast iron body protects the pump impeller from knocks and site abuse as it is lowered into the trench. The open mesh base allows water, sludge and solids up to 28mm in diameter to be pumped to a maximum of 28 meters in height.

The steel reinforced flex drive shaft features a sliding collar to support the shaft as it bends over tight edges. The shaft is fitted with a standard 3-dog drive and can be powered most petrol powered drive units.
