Dimensions (LxWxH)	2159mm x 1219mm x 1041mm

Husqvarna CR48-13A-V Walk Behind Trowel Machine

The Husqvarna CT48-13A walk behind trowel machine is ideal for finishing medium-large commercial and industrial slabs. The unique handle bar design and optimal weight distribution make the CT48 a well balanced, user friendly machine. This unit also features a torque convertor clutch giving it an incredibly wide RPM range from 25-200RPM.

The CT48 also comes with a suite of safety features to protect the operator and others in the immediate area should the machine get out of control. The transmission brake, electronic safety switch and the engine speed sensor work together to detect and bring the machine to a standstill within 3/4 of a turn if the machine is let go. Furthermore, the unit will not start unless the throttle lever is set to zero to prevent inadvertent rotation of the handle on start-up.
