

CURING SPRAYER

FORZA CCS205T

F RZA

Model	CCS205T
Engine	Honda GX200
Pump Type	Triple Diaphragm
Flow Rate	44 l/m
Pressure	40 Bar / 580 PSI
Hose Length	30m
Gun	AL55

Forza CCS205T Curing Compound Sprayer Trolley

Built from the ground up by our team at Allcon, the CCS205T is perfect for applying not only curing compounds but also evaporation retarders, bond breakers, penetrating waterproofers and more. The compact trolley design makes it easy to load a full 205L drum and secures with a simple locking gate.

At the front of the trolley sits the Honda GX200 engine and Italian triple diaphragm pump. Once the drum is loaded, simply insert the intake and outlet tubes and you're ready to go. With the flick of lever, you can set the pump into recirculating mode. This ensures your liquid is thoroughly mixed through. The flow control on the pump can also be adjusted to suit different viscosity materials.

Rounding it all out with the AL55 Gun and retractable hose, the CCS205T enables spraying up to 30m away from the sprayer making it a truly economical and versatile sprayer for covering large quickly and efficiently.
